

- **Main Regulatory Applications Required**
 - field development and facilities at Taglu, Parsons Lake and Niglintgak
 - gas-gathering system and natural-gas liquids pipeline
 - construction of a 1,220-kilometre gas transmission pipeline and associated facilities to transport gas from Inuvik to northern Alberta

- **Environmental Impact Statement**
 - biophysical setting and impact assessment (air, noise, water, land, plants, wildlife, climate)
 - socioeconomic setting and impact assessment (data on people, infrastructure, economy in communities, regions)
 - addresses impacts of all components of the proposed project

- **Project Permit Applications**
 - required before field work can commence
 - include land use permits, water licences, quarry permits, fisheries authorizations, etc.
 - filing will begin in early 2005
 - approximately 6,000+ required

Key Points

- There is a considerable amount of comprehensive detail on the regulatory applications that we have already filed for the Mackenzie Gas Project, as well as the Project Permit Applications we intend to file early next year.
- The main regulatory applications for the Mackenzie Gas Project are:
 - the three Development Plan Applications for Parsons Lake, Taglu, and Niglintgak,
 - the Application for Approval to Construct the Mackenzie gathering system, and
 - the Application for a Certificate of Public Convenience and Necessity (CPCN) for the Mackenzie Valley Pipeline
- Supporting these applications are the Environmental Impact Statement and the Public Consultation Report, which address the impacts of the proposed project.
- Project permit applications, or PPAs, are permits, licences and authorizations required before actual field work can commence. These include Land Use Permits, Water Licences, Quarry Permits, Fisheries authorizations, etc. It's estimated that in excess of 6,000 individual permits, licences and authorizations will be required for the project.
- Applications for groups of permits will begin to be filed in early 2005, and we are currently in the process of consulting with the public on these permits.
